

14TH ANNUAL INTERNATIONAL ABOVEGROUND STORAGE TANK CONFERENCE & TRADE SHOW
ROSEN SHINGLE CREEK HOTEL | ORLANDO, FLORIDA

NISTM CO-LOCATED EVENT:
EPA SPCC & FRP SHORT COURSE
March 27, 2012

EPA SPCC & FRP AGENDA

8:00am – 12:00pm

The purpose of the Spill Prevention, Control, and Countermeasure (SPCC) rule is to help facilities prevent a discharge of oil into navigable waters or adjoining shorelines. This rule is part of the U.S. Environmental Protection Agency's oil spill prevention program and was published under the authority of Section 311(j)(1)(C) of the Federal Water Pollution Control Act (Clean Water Act) in 1974. The rule may be found at Title 40, Code of Federal Regulations, Part 112.

A facility is covered by the SPCC rule if it has an aggregate aboveground oil storage capacity greater than 1,320 U.S. gallons or a completely buried storage capacity greater than 42,000 U.S. gallons and there is a reasonable expectation of an oil discharge into or upon navigable waters of the U.S. or adjoining shorelines.

Spill Prevention Control and Countermeasure (SPCC) Rule 101

Mark Howard, U.S. EPA, Office of Emergency Management

The short course will provide a basic overview of the U.S. EPA SPCC Rule, a discussion on compliance dates, and an understanding of how the EPA will be implementing the spill prevention program in field. Individuals attending this session will gain a valuable understanding of how to comply with the federal oil spill prevention requirements at their facilities.

This four hour overview will cover the SPCC requirements for:

- Storage tanks and piping
- Transfer operations
- Facility diagrams
- Closure requirements
- Yearly training
- Brittle fracture evaluations
- Integrity testing
- Security and
- Secondary containment

The presentation will also cover:

- Rule exemptions
- Amended definitions brittle fracture evaluations
- Tier I & II self certification options

LUNCH BREAK

1:00pm – 5:00pm

In 1994, EPA finalized the Facility Response Plan regulation at 40 CFR Part 112.20 and 112.21. Promulgated under the authority of the Oil Pollution Act of 1990, the regulation requires certain facilities that pose the risk of substantial harm to the environment to prepare plans to respond to a worst case discharge of oil. FRP-regulated facilities must develop and submit a plan to their EPA Regional Administrator. EPA reviews and approves FRPs for certain facilities that have the potential to cause significant and substantial harm. There are over 4,400 FRP plan holders in the U.S.

Plan requirements for Facilities Covered by EPA's Facility Response Plan (FRP) Regulation

Troy Swackhammer, U.S. EPA, Office of Emergency Management

This presentation describes the requirements and expectations for the FRP plan holders.

This four hour short course will cover:

- Introduction and purpose of the FRP regulation
- Plan requirements under §112.20 and Appendix F Relationship of the FRP to the National Contingency Plan, Area Contingency Plans, and other preparedness activities conducted by industry, USEPA, and USCG
- Steps in planning and implementing an FRP, including PREP requirements (drills and exercises)
- Common problems observed and recommendations for improvement of plans and exercises

National Institute For Storage Tank Management
