

'It's not Your Father's Fuel'

A look at the real world problems caused by the use of Ethanol, Bio-diesel, and Ultra-Low Sulfur Diesel

Marshall T. Mott-Smith, President

An Underground Storage Tank System

Alternative Fuels

- E-10 Ethanol
- E-15 Ethanol
- E-85 Ethanol
- B-20 Bio-diesel
- ULSD – Ultra-Low Sulfur Diesel

CAUTION!

This fuel contains 15% ethanol maximum

Use only in:

2007 and newer gasoline cars
2007 and newer light-duty trucks
Flex-fuel vehicles

This fuel might damage other vehicles.
Federal law *prohibits* its use in other
vehicles and engines.

**ULTRA-LOW SULFUR
HIGHWAY DIESEL FUEL**
(15 ppm Sulfur Maximum)

Required for use in all model year
2007 and later highway diesel
vehicles and engines.

Recommended for use in all diesel
vehicles and engines.

Why are we using Ethanol? (from government sources)

- Air pollution – as an oxygenate to make fuel burn cleaner and reduce air pollution
- Augment the nations fuel supply and reduce reliance on foreign fuels
- Stimulate the economy
- It's a “Green” Fuel

Problems with Ethanol...

1. Ethanol does not burn that much cleaner than regular gasoline
2. Using Ethanol leads to an energy drop-off
3. Using Ethanol competes with food crops and increases food costs
4. Chemically-speaking, Ethanol wants to become water
5. Phase Separation
6. Some older fiberglass systems are not compatible
7. Ethanol loves to eat soft metals, rubber, and plastics
8. More frequent dispenser filter changes
9. Ethanol has a scouring effect on tank systems
10. Ethanol is destroying our petroleum pumping infrastructure

Alternative fuels (ULSD, Ethanol and Bio-diesel)

- Have only been in widespread use nationally for about five to six years
- Growing number of problems with the integrity of storage tank system equipment

Evidence of problems discovered from facility monthly visual inspections and State UST regulatory and fuel quality inspections

Ethanol-Free Gasoline Has Become a Marketing Tool

Advertising Ethanol-Free Fuels

Recent National EPA/State Regulator Field Study with Ethanol Corrosion

- EPA provided sampling kits
- Passive diffusion samplers were placed in piping sumps to measure the concentrations of ethanol and acetic acid
- Data came from Florida (35), Tennessee (13), Illinois (6), Wisconsin (4), California (2), and Iowa (1)
- 27 RUL, 2 MUL, 26 PUL, 5 E-85, and One Diesel

Findings

- Many sumps had high concentrations of Ethanol or Acetic Acid
- No significant difference between RUL & PUL
- Corrosion worse in sumps with high concentrations
- Corrosion worse in sumps with water
- For Ethanol to cause corrosion in a sump, there must be ethanol, bacteria, and water
- Eliminating one of these could prevent corrosion?

Other Problems

- Warranties for UST and AST Fuel System Components
- Vehicle Warranties
- Concerns with traditional problems from ethanol fuel use such phase separation, degradation of soft metals, increased filter replacement, and the scouring effect on fuel tanks
- UST & AST owner acceptance
- Consumer confidence

Ultra-Low Sulfur Diesel

**ULTRA-LOW SULFUR
HIGHWAY DIESEL FUEL
(15 ppm Sulfur Maximum)**

Required for use in all model year
2007 and later highway diesel
vehicles and engines.

Recommended for use in all diesel
vehicles and engines.

Ultra Low Sulfur Diesel

Submersible Pump & Riser

Strainer

“Coffee Grounds”

**Problems reported from all regions of the country-
No problems reported at refineries, pipelines, not
associated with individual supplier**

Problems Observed

- **Filters clogging/requiring more frequent replacement**
- **Seal/Gasket/O-ring deterioration**
- **STP replacement/Column pipe wear/Motor problems**
- **Tanks rusting/leaking (includes tanks of vehicles)**
- **Meter Failure**
- **Line leak detectors damaged or broken**
- **Automatic nozzle shutoff failure/shorter lifespan**
- **Tank probes malfunctioning**
- **Check valves not seating**
- **Shear valves not sealing/failing tests**
- **Swivels failing/shorter lifespan**
- **Dispenser leaks/failures/ premature replacement**
- **Solenoid valves clogged/failing**
- **Corrosion on the riser pipe**
- **Pipe failure**

ULSD Corrosion – UST Detail

UST showing corrosion and possible microbial corrosion spots.

Likely Causes

- No one cause, but rather a mixture.....
- Microbial influence getting a lot of attention:
- Salt and other contaminants also a contributing factor?
- Corrosion inhibitor depletion (aka “soap”) theory – acidic additives form soaps if contacted with excessive tank water cations from salts or caustic:
- Poor housekeeping, no biological monitoring, improper application of biocides exacerbates problem

The Clean Diesel Fuel Alliance

- Created in early 2006
- Participants include:
 1. Government
 2. Engine Manufacturers
 3. Marketers
 4. Refiners
 5. Marketers
 6. Equipment Producers

The screenshot shows the homepage of the Clean Diesel Fuel Alliance Information Center. The header features the text "Government - Industry - Consumers" above the main title "Clean Diesel Fuel Alliance" and "INFORMATION CENTER". A navigation bar includes links for "Skip Navigation", "About ULSD", "EPA Standards", "EIA", "ULSD Compliance", "Media Room", and "Contact Us". A green sidebar on the left contains menu items: "Highway ULSD Fuel", "Non-Road ULSD Fuel", "Vehicle Performance", "Environment & Health", "Frequently Asked Questions", and "Quicklinks to Member Web Sites". The main content area has a light blue background with a cloud pattern. It features a central headline: "Ultra Low Sulfur Diesel (ULSD) fuel and new engines and vehicles with advanced emissions control systems offer significant air quality improvement." Below this are four columns of text, each with a small image and a link. The columns are: "Highway ULSD Fuel" (with an image of a fuel nozzle), "New Diesel Technology" (with an image of a car), "Non-Road ULSD Fuel" (with an image of a truck), and "Environmental Benefits" (with an image of a child in a pool). At the bottom, there is a link for "Para leer en español el folleto sobre diesel ultra bajo en azufre" and "Energy Tomorrow Radio Podcast on ULSD". A small graphic on the left side of the bottom section shows a fuel pump nozzle with the text "ULTRA-LOW SULFUR HIGHWAY DIESEL FUEL (15 ppm Sulfur Maximum)".

Ultra Low Sulfur Diesel (ULSD) fuel and new engines and vehicles with advanced emissions control systems offer significant air quality improvement.

Highway ULSD Fuel
EPA standards have led to a major reduction in the sulfur content of diesel fuels.
[Highway Diesel](#)

New Diesel Technology
Ultra Low Sulfur Diesel (ULSD) is a cleaner-burning diesel fuel containing a maximum 15 parts-per-million (ppm) sulfur.
[Vehicle Performance](#)

Non-Road ULSD Fuel
New EPA fuel standards for diesel fuel also apply to locomotive, marine and non-road engines and equipment, such as farm or construction equipment.
[Non-Road Diesel](#)

Environmental Benefits
ULSD fuel along with new engine and emission control system technologies have an important role in improving air quality and providing human health benefits by significantly reducing current emissions.
[Environment and Health](#)

[Para leer en español el folleto sobre diesel ultra bajo en azufre](#)
[Energy Tomorrow Radio Podcast on ULSD](#)

Service Station Owners/Operators
Remember to keep all pumps properly labeled (especially when refueling or replacing pumps).

ULTRA-LOW SULFUR HIGHWAY DIESEL FUEL (15 ppm Sulfur Maximum)
Please refer to all labels and signs on pumps and vehicles. Do not use this fuel in off-road vehicles and engines.

Members of the Clean Diesel Fuel Alliance

- AAA
- Alliance of Automobile Manufacturers
- American Petroleum Institute
- American Trucking Associations
- Association of American Railroads
- Association of International Automobile Manufacturers
- Association of Oil Pipe Lines
- Diesel Technology Forum
- Engine Manufacturers Association
- Independent Liquid Terminals Association
- Manufacturers of Emission Controls Association
- National Automobile Dealers Association
- National Association of Convenience Stores
- National Association of Fleet Admins.
- NATSO, Inc., representing Truck Stops & Travel Plazas
- National Petrochemical & Refiners Association
- National Tank Truck Carriers, Inc.
- Petroleum Equipment Institute
- Petroleum Marketers Association of America
- Society of Independent Gasoline Marketers of America
- Steel Tank Institute
- Truck Renting and Leasing Association
- U.S. Environmental Protection Agency
- U.S. Department of Energy
- U.S. Energy Information Administration
- Western States Petroleum Association

Clean Diesel Alliance Study

The Battelle/Tanknology proposal was chosen and funded by API, PEI, STI, NACS, PMAA, NATSO, AAR, and Ford

Theories to Investigate

- **Aerobic and anaerobic microbes** are producing byproducts that are establishing a corrosive environment in ULSD systems
- **Aggressive chemical species (e.g., acetic acid)** present in ULSD systems are facilitating aggressive corrosion; and
- **Additives** in the fuel are contributing to the corrosive environment in ULSD systems

Test Sites

- **Chose 6 sites with similar throughput and history of issue:**
 - 1 site that does not show symptoms of corrosion
 - 5 sites with history of severe, rapidly induced corrosive symptoms
- **Sites in three states**
 - 2 in California
 - 3 in NY (including no symptoms site)
 - 1 in NC

Site Inspections

- Feb 8-23: Inspected 6 sites
- Report Completed Late Summer 2012

ULSD Corrosion – Assessment

New steel
corrosion coupon

After 3 months

So what did the Study Conclude?

- More studies are needed, but one of the causes of corrosion with ULSD systems is...

Conclusion- The Source of the Problem...Ethanol!

Bio-Diesel

- Many Bio-diesel plants shut down when the price dropped
- Problems with feedstocks and maintaining quality
- Problems with cold-flow and scouring effects on tanks
- Problems with “shelf-life”
- Expensive to refine
- Prone to microbial growth

Questions?
